Instructions to Authors – Publication Information

1. Aims and scope of FAL

Fundamental and Applied Limnology publishes original contributions containing important new scientific findings in the fields of “Theoretical and Applied Limnology, including Brackish Water Biology or related fields of (Marine) Biology.” The following types of manuscripts are published:

Standard papers: Should be as concise as possible, less than 20 printed pages in the published issue. Longer manuscripts will be accepted for publication in the Main Volumes of the FAL in *exceptional* cases only. Shorter submissions take precedence when space is limited.

Notes: These should be structured like standard papers and contain short original contributions presenting new methods or other results of general interest.

Comments: Very short papers (max. 2 pages) containing opinions, contributions to current scientific debate or responses to published articles.

Invited reviews: Articles summarizing the state of the art of particular topics of general interest. Authors planning a review article must contact the editors before preparing the manuscript.

All manuscripts are subject to peer review.

2. Manuscript submission

Please **submit manuscripts via the electronic Manuscript Management System on**

www.schweizerbart.de/journals/fal

First time users please register as author, then follow the submission process. **Submission of a manuscript to the electronic Manuscript Management System for publication in the FAL is considered binding assurance that this work has not been and will not be published elsewhere in this form and length.**

3. Manuscript preparation

Papers must be written in English and prepared preferably using Microsoft Word for Windows. Please activate line numbering: File/page setup/pagelayout: Show line numbers, Line numbering: Continuous/Begin with line 1.

To avoid confusion with spacing, right-hand justification should be switched off. Do not use style sheets or templates. Number all pages, starting with 1 on the title page. If the software used to prepare the manuscript can do so, number all lines of text.

Following the **title** and the **author(s) name(s)** please indicate the **address** of the institution where your contribution was produced. A short **Abstract** without paragraphs and some **key words** should be given at the beginning of the work. A summary may be given before the references at the end of more comprehensive works.

Figure legends and tables are to be included at the end of the paper on (a) separate page(s).

Accentuation Typefaces: Please use only **boldface** and *italics*. Please do not use capitals for titles and headlines. *Units:* Use the International System of Units (SI). Use negative exponents (e.g., mg l⁻¹ h⁻¹).

Literature References: All publications referred to in the text, tables and figures captions must include the name of the author(s) or the name of the first author with the addition et al. and the publication date in parentheses. All publications referred to in the text must be included in the reference list and vice versa.

The format of in-text citations should be as follows: for one author (Jones 2003) for two authors: (Cumchal & Drenner 2004), and (Jones et al. 2006) for more than two authors. Use commas to separate multiple citations. Multiple citations in-text are ordered chronologically.

When abbreviating journal titles, we request that the author uses the Serials Source List for the Biological Sciences, used by Biological Abstracts/BIOSIS, see

http://www.csa.com/ids70/serials_source_list.php?db=aquclust-set-c

Thus, references should appear as follows:

Schroeder, F., Muschiol, D. & Traunspurger, W., 2010: Fluctuating food availability may permit coexistence in bacterivorous nematodes. – *Fundam. Appl. Limnol.* **178**: 59–66.

Dumont, H. J. & Negrea, S., 1996: Introduction of the class Branchiopoda. – In: Dumont, H. J. (ed.): *Guides to the Identification of the Continental Waters of the World 19*. – Backhuys, Leiden, pp. 1–398.

4. Illustrations

All illustrations must be labelled with the figure numbers. They must be numbered consecutively as they are referred to in the paper. Labelling should be done using the font “Times” or “Helvetica (Arial)” and must be large enough to allow necessary reductions in size. The font of the illustrations has to be consistent throughout the paper.

Halftone figures should have a resolution of at least 300 dpi (.tif, .eps, .jpeg), **line drawings** (only .tif or .eps!) should have a resolution of at least 600 dpi, preferably 1200 dpi.

For publishing **colour figures online and in print an extra charge** will be applied. Please contact the publishers for details.

5. Corrections in proof

Only corrections of typesetting errors are accepted. All other changes to ms. can only be made at the expense of the author.

6. Reprints / pdf

50 reprints or alternatively a pdf-file for personal use **free of charge** will be supplied of each published paper; additional reprints may be ordered at cost.

7. Copyright

With acceptance and publication of a manuscript the **exclusive copyright** for every language and country **is transferred to the publishers**. The copyright covers the exclusive rights to reproduce and distribute the article including reprints, microfilm or any other reproductions and translations.

8. Online Access

Since 2002 *Archiv für Hydrobiologie*, now **Fundamental and Applied Limnology**, is available online through Ingenta. It is part of the CrossRef Service which allows direct access to referenced papers (published in this or other journals) which are available online. Conversely, papers in other journals are now able to link to papers published in **Fundamental and Applied Limnology** by placing direct reference links.

9. Publication Frequency

Fundamental and Applied Limnology is published by numbers (issues), 4 issues form a volume. Invoicing per volume. Approximately 12 issues of the FAL are published per year, currently that is one issue per month.

Authors are encouraged to place all species distribution records in a publicly accessible database such as the national Global Biodiversity Information Facility (GBIF) nodes (www.gbif.org) or data centers endorsed by GBIF, including BioFresh (www.freshwaterbiodiversity.eu).

The Editors and Publishers, July 2013
